

GROUNDWATER MODELING WORKSHOP

Presented By: Deltares & City of New Orleans
in partnership with Tulane University

Tulane School of
Architecture and
Built Environment

City of New Orleans

Deltares USA

This workshop presents a detailed groundwater model focused on the shallow urban subsurface of New Orleans, reaching depths of approximately 40 meters. The shallow groundwater model developed in this study provides a time-dependent understanding of phreatic groundwater levels, both under current conditions and future scenarios. It is designed to support groundwater management by simulating the effects of policy and environmental changes on the groundwater system and surface elevation. This workshop offers an in-depth look at the model, its capabilities, and its potential applications.

May 14, 2025 @ Tulane University

9:00 am – 4:00 pm

Coffee, Drinks & Lunch will be provided

Richardson Memorial Hall | 6823 St. Charles Ave

RSVP to Anthony.Kendrick@nola.gov
